MASTER EFFECT:

(Multi Power)

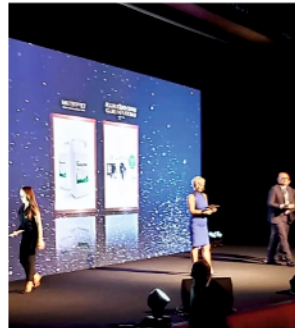

It is a new generation leaf and drip fertilizer, consisting of organic matter, carbon, nitrogen, free amino acids, natural enzymes and activators, and prepared in a form that provides the most comfortable uptake for plants from both soil and leaves. It is an award-winning product, whose R&D was completed on (64) types of products with field studies lasting six years, and produced with the new generation fertilizer technology, whose contribution to productivity in all kinds of plant cultures has been proven.

2023

Agri Plus Agriculture Innovation Awards

"Most Innovative Fertilizer Technologies"
finalist.

- It stimulates underground microbial activity and enables them to move thanks to the natural enzymes and activators it contains.
- It accelerates the uptake of released nutrients by providing solubility in the soil.
- It provides strong, healthy, balanced, long-term direct nutrition to plants thanks to its rich content.
- It accelerates root development and increases efflorescence.
- It directly contributes to productivity by increasing flowering in the plant.
- It thickens plant walls, extends plant height, accelerates shoot development, germination and increases tillering.
- It dissolves nutrients in the soil and ensures that the fertilizers used are carried to the plant body.
- It increases fruit bearing, caliber and quality.
- It provides a tonnage contribution between 25% and 40% in all plant cultures.
- It provides earliness in plants.
- It noticeably increases the aroma of fruits and vegetables. Increases plant resistance, provides resistance to frost, diseases, stress.
- Increases the organic matter value and water retention capacity of the soil.
- Helps regulate the pH of the soil.
